liposcki@yahoo.com.br**INTRODUCTION**

Joseph Pilates was self-taught and managed to develop a methodology able to provide the balance between strength and flexibility. Contrology as Joseph called his method is the complete coordination of body, mind and spirit (PANELLI e DE MARCO, 2006).

As Davis (2006), Joseph Pilates developed eight basic principles to guide their exercises. These principles are: concentration, control, precision and coordination, isolation and integration, centralization, flowing movement, breathing and routine.

The method is widely used by many professionals, both those who work in the training of athletes and also in the prevention and treatment of musculoskeletal disorders (KOLYNIK e CAVALCANTI, 2004).

According to Rose and Lima (2009), the finding that the number of practicing Pilates has increased greatly in recent decades comes only encourage and support the need for the scientific basis for health professionals in this area.

There has been a considerable growth in the number of professionals working with the Pilates method in Lages / SC, which has 156,737 inhabitants and is the 8th most populous municipality of Santa Catarina corresponding to 2.5% of the state population (LAGES EM DESENVOLVIMENTO, 2012).

Thus we see the need for studies on this technique, in order to inform more and more people as well as professionals in the health, economy and education.

OBJECTIVE

Describe the socio-economic service with the Pilates method in Lages/SC.

METHODS

Transversal descriptive study (ANDRADE, 2010), conducted in Lages SC on establishments that offer service Pilates. At first we conducted a survey of the sites that had the service, such as gyms, physical therapy clinics and Pilates Studios. Then were delivered the Statement of Consent - Informed Consent and an attached questionnaire with 16 questions concerning the socio-economic related services, such as the monthly, investment management fees of professionals, among others.

The sample was composed by 33 professionals, using the following inclusion criteria: informed consent and signature of completing the questionnaire.

Data were analyzed using SPSS 13.0 (APACHE, 2004) for descriptive statistics through.

RESULTS AND DISCUSSION

The city of Lages-SC has 25 establishments offering the service Pilates, between clinics, gyms and studios, and in such, act 37 professionals. The sample was composed by 33 professionals, with the majority (60.6%) said they worked in another location besides the pilates, most of them (54.6%) held graduate Pilates in Lages-SC.

Regarding the age of the students practicing Pilates, the majority (63.6%) of the students are between 40 and 50 years old. The female is the most practiced Pilates (90.9%) corroborates a study of Lima et al (2009), there was a predominance of females in the sample, indicating the interest of women to seek and practice activity physics. According Dumith et al (2009), national studies confirm that women are more likely than men to engage in activities.

It was observed that there are more professionals Physiotherapy (79%) working with Pilates in Lages-SC than Physical Education professionals (21%). According to Da Silva and Mannrich (2009), Pilates can be an effective tool for physiotherapist in rehabilitation, with varying benefits and few contraindications. Can be used by physical therapists for rehabilitation of different populations and dysfunction, always following the principles of the method and respecting the individual conditions.

As the law COFFITO Resolution No. 386 of 08/06/2011 competes physiotherapist for the exercise of the Pilates method, prescribe treatment to induce and evaluate the result from the use of resources and mechanic therapeutics. As Di Lorenzo (2011), Da Silva and Mannrich (2009), professionals working in clinical Pilates should consider prescribing training and limitations of patients and athletes. It is essential to know its applications, counter indications, how to use, in addition to other characteristics make and offer the patient the technique appropriately to the changes made by him. The high demands neuromuscular classical method should be adapted and adaptation in rehabilitation is challenging.

The Physical Educator according Tojal et al. (2004), that is geared to the practice of specialized knowledge in anatomy and physiology of the human body, developing movements and activities aimed at the welfare of the person. According to the resolution CONCEF No. 201/2010 is the prerogative of Physical Education Professionals aimed at Pilates to promote, optimize, enhance and improve physiological functioning organic, as well as the conditioning and performance physical body oriented wellness, style active life and promoting health.

The effectiveness depends on the Pilates instructor; requirements for certification of instructors are varied. Pilates is being increasingly integrated rehabilitation programs for professionals without adequate training (DI LORENZO, 2011).

The method most used by professionals is the Studio (87.8%), followed by soil (12.2%). The Method Pilates studio consists of performing exercises that uses gravity and resources mechanic therapeutics as springs, which act as resistance during the execution of the movement, as well as the help of own motion. And accessories can be used not used originally by Joseph Pilates as balls, elastic, rubber and dumbbells (RODRIGUES et al., 2010).

Regarding the number of students per zone (42.4%) of professionals sample participants meet three students per schedule. According to the Brazilian Association of Pilates (2012), the classes can be: individual or in groups of up to three people. This happens for the series to be adapted to the needs of each practitioner and also so that the instructor can devote

attention to the quality of the movements of each student.

Regarding the investment in equipment, the 25 establishments 52% invested more than R \$ 20,000.00, 16% of R \$ 10,000.00 to R \$ 15,000.00 and 32% of \$ 5,000.00 to R \$ 10,000.00.

Regarding the form of payment, 95% of students pay tuition establishments anticipated month of use. The following table illustrates the mean, mode, minimum and maximum amount of tuition charged according to the number of weekly classes.

Table 1. Monthly and Weekly Lessons Numbers

	1 session/ week	2 session/ week	3 session / week	4 session / week
Mean	R\$84,00	R\$151,00	R\$208,00	R\$ 264,00
Mode	R\$70,00	R\$140,00	R\$210,00	R\$ 280,00
Minimum Value	R\$40,00	R\$40,00	R\$46,00	R\$55,00
Maximum Value	R\$130,00	R\$240,00	R\$360,00	R\$480,00

The form of contract settlement with professionals serving in Pilates is through fee for service (64%), monthly salary (8%) and attendance by owner (28%).

The following table demonstrates the values mensair Pro-Labore total establishment as well as the Pro-Labore professionals.

Table 2. Pro-Labore

	Studio/ Clinic / Academy	Professional
Mean	R\$3.600,00	R\$2.000,00
Mode	R\$3.000,00	R\$1.500,00
Minimum Value	R\$900,00	R\$200,00
Maximum Value	R\$7.000,00	R\$5.500,00

Monday Magazine Pilates (2013) in the United States the price per class can reach U \$ 75.00 dollars. In Brazil the monthly price for 2 classes per week may several R \$ 150.00 to R \$ 550.00 on average, depending on the region of the country, this is an average of the market and should not be seen as a "guide values" each professional must have an understanding of how their work is worth.

William Melilli, commercial manager Metalife Pilates (REVISTA PILATES, 2013), active in manufacturing equipment, consulting and professional training, says i amount charged by Pilates classes are associated with high levels of training of professionals and the cost of initial investment in safety, ie, quality of equipment. With a studio, well equipped with a specialized teacher and international certificate requires good investment initial and constant investment in both professional and update the devices.

CONCLUSIONS

We conclude that in Lages / SC there are more Physiotherapists with Physical Educators working with the Pilates method. The average investment in the Studio is R \$ 15,000.00, the average tuition charged for two classes per week is \$ 151.00; the average monthly income of professionals involved is R \$ 2,000.00.
