1. INTRODUCTION

With the intention of developing outreach activities, the Federal Institute of Mato Grosso (IFMT) - Campus Cáceres, seeking to contribute positively to the transformation of social reality, providing opportunities for the consolidation of joint proposals through actions with the involvement and participation of all in building a more just and humane society, chose the Quality Education and the Sport Tool as propellants means to create conditions and opportunities for new generations to develop their potential as individuals, citizens and workers.

Reaffirming Affirmative policies, serving children in the age group 08-10 years in sports initiation activities in Futsal, through an experienced methodology in the development of human potential through the sports and leisure practices, such as educational and social instrument aimed at training of personal, social and productive cognitive.

Aiming to create opportunities children, conditions necessary to develop their potential to the process of self-realization and full exercise of citizenship through sports activities and issues related to health and quality of life, promoting the involvement and cooperation, integrating the IFMT and society.

2. THEORETICAL

Located on the northern edge of the Pantanal, the left bank of the Paraguay River, the city of Cáceres consists of a traditional riverside population, typically Pantanal with approximately 90,000 inhabitants, who survive, greatly, fishing, pottery activity, craft and services menial. Being border region with Bolivia, it becomes a vulnerable corridor of smuggling and drug trafficking, significantly increasing the framework of violence and social risk, especially for children. These reasons that mobilize and sensitize various entities to fulfill its social role in favor of human development in the pursuit of improving the quality of life and opportunity for all. Low collection of the municipality does not allow sufficient investment to meet social demands, increasingly complex, and this makes the city look for new partners and agreements to minimize and assist in solving community activities deployment problems.

The sport as a great tool of transformation, social inclusion through attractive, mediator and integrator of individual and collective action, seeks to meet the desires, interests and needs of people. In this sense, this project Futsal Legal thought of as more an educational and social instrument, does not claim that its central axis turns to the structuring of a sports program in a comprehensive and humane education, so as to make a difference in the processes of transformation of existing social realities of children.

Starting from the raised issues, the project activities will be a complementary action to the education of students in some poor neighborhoods surrounding the Institute, strengthening the integrator via the various human dimensions and education processes, based on the key players involved in humanistic education - family, school and community to the significant build a broad educational and social process, for the sake of education and human development of children at social risk.

Taking advantage of this age group , important for the motor and emotional development of children , great for the acquisition and combination of new forms of movement (Meinel , 1984) , learning motor skills (WEINECK , 1989) , engine collection training (LUCENA 1994) and construction of ideas and values (Santana , 1996). To be successful in the next stage of sports performance (and also in the construction of a leisure culture and health) must comply oriented motor activities (MARQUES, 1991) , lived in playful and participatory climate (Santana , 1996). And through sports , specifically soccer, promote interaction between society and the Federal Institute of Education , Science and Technology of Mato Grosso .

3. METHODS, RESULTS, ANALYSIS AND INTERPRETATION OF DATA

João Batista Freire (1998) defines some guiding principles of pedagogical conduct in the football education, which keep being relevant to the futsal teaching, electing four principles: to teach football at all; teach football good to all; teach more than football at all; teach to love the sport. Thus, the methodological process will be built in this perspective, a participatory action planning and decisions taken collectively. Seeking in this way, the implementation, as needed, and timely interventions for the actions in the communities, aimed at transforming crafted reality by adapting to the context and local possibilities.

The project was initially developed with students in the age group 08-10 years belonging to circunvizinhos neighborhoods IFMT - Campus Cáceres. Students included in the Project participated in physical and technical, initial and periodic evaluations in order to perform the initial diagnosis, monitoring of performance and quality of their work, as well as lectures on topics related to health and quality of life, cultural, relations between the media and sport, violence and sport, and food. An educational meeting with the coordinators, scholarship and executing team for evaluation, discussion and follow-up activities being held monthly.

Forms of tracking and monitoring of ongoing actions were diagnostic and continuous, pointing out not to be concerned only with the final result, but in such aspects as regards child-family-society by checking the level of development and performance, responsibility and professional self-realization. Seeking to follow up with the parents, the school unit to the same study, as well as the significant improvement in the course of the project classes.

The main results were: improved family integration, improvement in school performance, improved motor and emotional development of children, and automatically your quality of life.

As these results , and the search for new students , was given continuity of institutionalized fashion design , following the age of the students , and today, we have students on our campus that were design students.

Records are grouped in the form of reports, photos, videos, and systematic data for analysis as a historical record and a reference source of knowledge and didactic - pedagogic and social instruments produced

4. DISCUSSION AND CONCLUSIONS

Concern for children at risk in an attempt to give opportunity them to be included in a playful activity, systematic, pedagogical nature is the foundation of this small and important educational activity. And it demonstrates that we can make such a difference. Numerous issues are relevant, first, student motivation in joining the project. Another important aspect refers to the relationship of parents and students, greatly improving the family relationship, accompanied by the project and reported by several parents in class schedules and meetings. Also raised in this research was the experience of making the monitoring of school performance, along with school unit, which allowed for significant improvement in learning.

The improvement of motor and emotional development, and automatically improving the quality of life, strengthens us more and more the need for institutions and physical education professionals, to use sport as a tool of social inclusion and education.

Finally, it is observed that the work of the legal Futsal Project reached and achieves its goals, as well as teaching learning the sport in question, provided an opportunity to promote health and physical fitness, purchasing habits and motor behaviors, and the understanding of sports as a cultural factor, stimulating feelings of solidarity, cooperation, autonomy and creativity, and not worrying about immediate results, leaving this moment for posterity, when it will begin the training of athletes, through more specific training.

One of the important factors being the continuation of the project Futsal legal, developing a systematic action of IFMT Campus Cáceres, and the city, from 2015 in partnership with PROEX - Pro-Rector of IFMT extension, the Future project was approved, that works in the central area of the city of Cáceres in the age group 12-16 years old. Providing opportunities for the monitoring of these students, in another perspective, the prospect of participation in sports competitions, but we'll talk another time.

Therefore, the initiation of work with any sport, you need to seamlessly occur between theory and practice - a human-creator and responsible exercise that, governed by its own pedagogy, transmit much more than learning coaches gestures, but ethical, social and moral values that should be taught through the various possibilities that the concept of sport covers, so you can make the student a being and transforming agent of his time, concerned about a citizenship allowing him to live well in whatever is the path chosen by him, then.
